

DASHBOARD WALKTHROUGH

Objective & Scope

This interactive dashboard serves as a strategic tool for stakeholders to dissect the Union Budget 2025. By translating raw budget data into actionable insights, it enables users to instantly identify which socio-demographic sectors, age groups, and geographic locations receive the highest resource allocation and policy focus.

Project Overview

This dynamic dashboard is an interactive analysis tool built to dissect the Union Budget 2025 initiatives and map their direct socio-economic impact. By moving away from static spreadsheets, the dashboard utilizes advanced array formulas (FILTER, LET, INDEX/MATCH) and relational data structures to allow users to dynamically isolate budget features based on **Target Professions, Age Groups, and Geographic Locations**.

Designed for both executive summary review and granular data lookup, the interface features live KPI tracking cards, cross-tabulated Pivot Table metrics, and custom-styled interactive Slicers. It successfully bridges the gap between raw policy text and structured data visualization, providing stakeholders with an immediate, bird's-eye view of focus sectors alongside a detailed personal impact lookup system.
